DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 29, 2008 has been entered.

Status of Claims

Currently, claims 21, 23, 35-36, and 38-39 are pending and under examination on the merits.

Response to Arguments

Applicant's arguments, see pages 3-4 and appendix A, filed on August 29, 2008, with respect to the rejection(s) of claim(s) 21-23 and 35-36 under lack of utility under 35 U.S.C. 101 and lack of written description under 35 U.S.C. 112, first paragraph have been fully considered and are persuasive. Therefore, the rejections have been withdrawn. However, upon further consideration, new grounds of rejection are made. See below.

Art Unit: 1635

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 39 is rejected under 35 U.S.C. 102(b) as being anticipated by Fodor et al. (US 2001/0053519 A1).

The claim is directed to a probe **comprising** the 24-nucleotide nucleic acid sequence SEQ ID NO:477 or 480 or 482.

Fodor et al. teach an isolated nucleic acid consisting of 25 nucleotides wherein the nucleotides are each A, C, T(or U), and G, wherein the nucleic acid is used as a probe. See claims 14-15. Accordingly, all claim limitations are taught by Fodor et al.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 36 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fodor et al. (US 2001/0053519 A1).

The claim is drawn to a vector **comprising** the 24-nucleotide nucleic acid sequence SEQ ID NO:477 or 480 or 482.

Art Unit: 1635

Fodor et al. teach an isolated nucleic acid consisting of 25 nucleotides wherein the nucleotides are each A, C, T(or U), and G, wherein the nucleic acid is used as a probe. See claims 14-15. They also teach that a fragment of a genomic sequence (e.g., the 25-mer nucleotide) can be inserted into a vector. See paragraph 0041.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to make a vector comprising the 24-mer of any one of the claimed SEQ ID NOs, because it was known in the art to insert a fragment of a genomic sequence into a vector for expression or cloning purpose as taught by Fodor et al. Accordingly, the claimed invention taken as a whole would have been *prima facie* obvious at the time of filing.

Conclusion

Claims 11, 23, 35, and 38 appear to be free of the prior art searched of record.

Claims 36 and 39 are rejected.
